

GITHUB

1º Primero creamos o iniciamos sesión en github. (En mi caso, he iniciado sesión porque ya tenía una cuenta creada.

2º Vamos a crear un repositorio nuevo, para eso le damos a crear un nuevo repositorio, y añadimos la información correspondiente.

The screenshot shows the GitHub 'Create a new repository' interface. At the top, there's a header with the GitHub logo, 'New repository', a search bar, and navigation icons. The main content area is titled 'Create a new repository' and includes a brief explanation of what a repository is. Below this, there are fields for 'Owner' (set to 'Albertsak') and 'Repository name' (set to 'prueba_Alberto', with a green checkmark indicating it's available). A 'Description' field contains the text 'Repositorio de prueba DAW2'. Under the 'Visibility' section, 'Public' is selected. The 'Initialize this repository with:' section has 'Add a README file' checked. The 'Add .gitignore' section shows 'None' selected. The 'Choose a license' section also shows 'None' selected. At the bottom, there's a note about the default branch being 'main'.

El enlace para mi repositorio es: https://github.com/Albertsak/prueba_Alberto
